

ReCaptured
INTELLIGENT OS

ONE PLATFORM · CRM, PROJECTS & WHATEVER YOU NEED NEXT

CRM, projects — and *whatever your business needs next* — in one intelligent system.

ReCaptured Intelligent OS unifies CRM, project management, and your company knowledge in a single AI-first workspace — then keeps going. Because it's built on a flexible data model, the platform isn't boxed into a fixed set of features: it takes on the objects, fields, and workflows your business needs and grows right alongside you. No more stitching together five disconnected tools, and no more outgrowing your software.

01 CRM, Projects & whatever you need next

Start with the essentials below — then extend the very same system to anything else you run. New capabilities are added as configuration, not another tool to buy and bolt on.

i. CRM that knows your customers

Companies, contacts, deals, and every interaction in one connected graph — enriched and kept current by AI so your team always works from the truth.

ii. Project & work management

Projects, tasks, milestones, and workloads live beside your customer data — with boards, calendars, timelines, and dashboards out of the box.

iii. A living knowledge base

Documents, notes, and files become searchable institutional memory. Ask in plain language and get answers grounded in your own content.

iv. Memory & learning built in

The system captures what happens, distills it into durable knowledge, and gets smarter with every interaction — insight compounds instead of walking out the door.

Grows with you. *Days, not months.*

As your business expands into new lines, teams, and processes, ReCaptured expands with it. Built on a flexible data model, most new fields, objects, and workflows are configuration — not code — so new needs go live in days, with no rip-and-replace.

0

code changes needed for the majority of new requirements

02 Intelligence at the core

Most software bolted on a chatbot. ReCaptured was built AI-first from the data layer up — intelligence runs through your CRM, projects, and knowledge as a teammate that drafts, enriches, recalls, and acts, always with your confirmation.

AI-first, end to end

Auto-fill records, draft updates, surface the right context, and turn a voice note or meeting into clean, structured data — inside the flow of work, with full provenance on every change.

Memory that compounds

ReCaptured remembers decisions, customers, and what worked — consolidating day-to-day activity into lasting knowledge so your team never re-learns what the company already knew.

03 Capture every word — built-in audio

Transcription & summarization, included

Conversations, meetings, and site visits become clean, structured records automatically. ReCaptured transcribes and summarizes audio in-platform, then drops the key points straight onto the right customer, project, or note.

Optional field recording device — so nothing is missed

An optional hands-free field audio device captures discussions out in the world, where notes never get written. Walk a site, run a meeting, take a call — it's all captured and turned into records back in the platform.

Immutable transcripts for a defensible audit trail

Every transcript is sealed and tamper-evident — a permanent, content-verified system of record. Corrections are tracked separately, never overwritten, giving you a complete and defensible history of what was said.

04 Built for global business

Multi-language, multi-currency, real translation

Multi-language interfaces, multi-currency handling, and on-the-fly translation let your teams and clients work in their own language and currency. One platform serves every market you operate in — without a separate system per region.

05 Enterprise-grade by design

Engineered to the standards you're held to

ReCaptured is built to satisfy the controls behind the frameworks below — encryption, role-based access, tamper-evident audit trails, and disciplined data handling are part of the platform from day one, not afterthoughts.

Built to comply — formal certifications are in progress.

All-in-one	AI-first	Global	Days
CRM · PROJECTS · & MORE	INTELLIGENCE AT THE CORE	LANGUAGE · CURRENCY	TO ADAPT, NOT MONTHS

LET'S TALK

See what *one intelligent system* can do for your team.

We'll show you ReCaptured Intelligent OS shaped around your business — your data, your workflows, your terminology — and how quickly we can stand it up.
